## Quantum Purifiers

Small COPPER Slipstream Quantum Purifiers are typically used in lower-current AC circuits, non-AC analog and digital circuits, and smaller mid-range drivers and tweeters. This product is made with 18 gauge copper wire.

This product will reduce noise and improve the overall signal to produce greater resolution and definition with an organic touch. Wire upgrades are available in silver and gold, which add another dimension to the improvements.

Higher current applications should consider Large Regular Purifiers or AC Bullet.

Body Length: 3/4 inch

Diameter: 1/3 inch

Leads: one inch, 18 gauge copper

Current-handling: 4.3 A

Voltage: >1000 V

Resistance: 0.025 ohm
