## Plug-Ins

These short single-ended interconnect Adapters utilize the Crystal Series Technology which enhances signal flow. These Gold RCA Adapters will reduce digital harshness. With the Bybee RCA Adapters in place, digital recordings suddenly become MUCH more listenable, and downright enjoyable. Music is airier, the sound stage is wider, deeper, and more dimensional and the music just flows effortlessly.

Each RCA Adapter is approximately 3 inches in length, with locking male ends. The RCA connectors are gold plated to insure best electrical connection. The internal wire is made of 14kt gold wire (not gold plated) that reveals a refinement and smoothness to the music that is even more organic and natural in its flow. They are designed to work down signal from each component.

They work great with turntables, and are equally good at amplifiers and pre-amps. Improvements in all ranges will be noticed.

The Bybee RCA Adapter should be placed on the interconnects leading from your source components at the signal destination end.
