

PARTS CONNECTION

CARDAS-71677

Notes:

-We use the red plug for the right channel, the the black plug for the left channel.

-After soldering, we suggest covering the open side of these plugs. At Cardas, we fill the cavity with hot glue, and then use shrink wrap to cover the opening.

-When inserted into the headphones, the open side of the plug (the side you see pictured here) should face inward, towards your ears . The right side's plug (red) should have the larger of the two pins facing towards the rear of the headphones, and the left side plug (black) should have the larger of the two pins towards the front.
