

Duelund CAST PP capacitors and CAST PP / Silver Hybrid are the perfect combination of high performance, impressive sound and an affordable pricepoint. Just like their famous brothers the pure metal foil WPIO Duelund CAST, which were designed as audio capacitors from the very beginning, these audio capacitors made from polypropylene provide a great synergy between low, mid and high frequencies. They will allow you to enjoy your music with ease, no matter what genre you are listening to.

Currently, 1uF to 50uF 250Vdc are available in the Polypropylene Capacitor series.
