

HiFi-Tuning

World's Best Fuses Since 2005

Supreme³-Copper 5x20mm
tip to tip (Cap's and melt wire) 100% Cardas Grade1 (low eddy) copper
(hand soldered with our Supreme³ solder)
warm, soft and natural sounding, BUT NOT „muffled or dump“

Supreme³-silver/gold 5x20mm
tip to tip (Cap's and melt wire) 99% Silver + 1% 24kt. Gold = 100% Power & Dynamics
(soldered by hand with our Supreme³ solder)
Fresh open dynamic sound with all details and punch

Supreme³-silver/gold 6,3x32mm
tip to tip (Cap's and melt wire) 99% Silver + 1% 24kt. Gold = 100% Power & Dynamics
(soldered by hand with our Supreme³ solder)
Fresh open dynamic sound with all details and punch

HiFi-Tuning Diamond Fuses

Why do we incorporate a diamond into a fuse or fuseholder?

It has been proven many times and is undisputed, that gemstones have a positive effect on us humans due to their naturally very high natural „vibrations“.

This is generally known and undisputed, especially in healing science and quantum physics.

After we had made listening tests with different gemstones and minerals, such as emerald, ruby, diamond and many other natural minerals, we could clearly hear that the diamond as the gemstone, which - correctly integrated - gave the sound a much more powerful, clearer and more dynamic reproduction.

For this reason, we have decided to use our Supreme³ Fuses & Holder, in which we will use only the highest quality and specially selected diamonds.

You can look forward to a new dimension of listening.

The first listening test of the new "SUPREME³ Diamond" fuse / holder brought, compared to the classic Supreme³ fuse / holder, again a significant (~20-30%) more gain in clarity in the sound image, more focus, more space, more three-dimensionality, more dynamics, bigger stage, more power in the sound image and brought significantly more live character to the playback!
