

Carbon Fiber Duplex Cover. Science Makes Silence.

In our never-ending quest for the lowest possible noise floor, we tackled the duplex cover with our patented UEF Technology, advanced material science, and dampening to build the ultimate duplex cover. We started with carbon fiber specially woven to eliminate vibration and added a UEF treatment to dramatically improve the performance of your duplex by shielding EMI and RFI within the duplex cover and then applied a unique closed cell foam for additional vibration control. The net effect is a lower system noise floor, and this translates into blacker backgrounds with improved microdynamics and increased air and surprisingly, improved overall dynamics in well-balanced systems. Think of our Carbon Fiber Duplex Cover as the Blue Fuse for your
